

Installing InfraFair with Anaconda

The following are the simple steps for installing InfraFair with the Anaconda prompt.

N.	Step	Execution
1	Download the Anaconda prompt compatible with your machine	https://www.anaconda.com/download
2	Open the Anaconda prompt and create a dedicated environment for installing the model	Type the following command: <code>conda create --name Workshop python=3.9</code>
3	Activate the newly created environment in the Anaconda prompt	Type the following command: <code>conda activate Workshop</code>
4	Install the InfraFair model on the new environment in the Anaconda prompt	Type the following command: <code>pip install InfraFair</code>
5	Checking if the model has been installed successfully	Type the following command: <code>pip show InfraFair</code>
6	Changing the director to run the InfraFair model by coping the location showed from the previous command	Type the following command: <code>cd c:\...\workshop\lib\site-packages\InfraFair</code>
7	Running the InfraFair model on the Anaconda prompt	Type the following command: <code>python InfraFair.py</code>
